

**IGEE 418 - ELE8461 – Electrical Power Generation  
(Production de l'énergie électrique)**

**Course Outline  
Winter 2019**

**Instructors:** Professor François Bouffard, P.Eng.  
Office: McGill University, McConnell Engineering Building, Room 642  
Telephone: 514-398-2761  
E-mail: [francois.bouffard@mcgill.ca](mailto:francois.bouffard@mcgill.ca)

Offices Hours: By appointment.

**Equivalences:**

|           |  |
|-----------|--|
| ECSE 463  | Electrical Power Generation (McGill University)                      |
| ELE 8461  | Production de l'énergie électrique (Polytechnique Montréal)          |
| ELEC 498F | Electrical Power Generation (Concordia University)                   |
| ELE760    | Production de l'énergie électrique (École de technologie supérieure) |
| GEL-3010  | Production de l'énergie électrique (Université Laval)                |
| 6GEI715   | Production de l'énergie électrique (UQAC)                            |

**Prerequisites:** A basic course in power system analysis and electromechanical energy Conversion. You should have a basic familiarity with: ac circuit analysis, three-phase systems, basic electromagnetic and electromechanical energy conversion devices.

Note: The course website should be used for all communications and questions regarding the course and coursework.

**Course Outline:** Objectives of the course

The goal of this course is to introduce the fundamental principles and challenges arising in power generation.

The specific course objectives are:

- To understand the principles of operation of electrical power generators and related energy storage assemblies
- To understand the structure and principles of the controls related to electrical power generators and generating stations
- To understand the principles governing the design and sizing of electrical generators
- To understand the principles behind the protection methodologies applicable to electrical generating stations and particularly the generators themselves
- To understand the principles governing generation dispatch, including management of hydro reservoirs and generating units
- To understand the standards governing the integration of electrical power generators to the power grid (grid codes)
- To understand the standards governing the interconnection of dispersed electrical power generation to the power grid (interconnection standards)

Topics covered

- Energy sources
- Principles of design, operation and control of synchronous generators
- Principles of operation and control of wind and solar generators
- Generation planning
- Generating station grid interconnection

|                        |                        |              |
|------------------------|------------------------|--------------|
| <b>Grading Scheme:</b> | Assignments (4)        | 25 %         |
|                        | Laboratory reports (3) | 15 %         |
|                        | Mid-term examination   | 20 %         |
|                        | Final examination      | 40 %         |
|                        | <b>Total</b>           | <b>100 %</b> |

**Laboratory:** Work using computer simulations covers the following topics and applications:

- Design procedures for large hydro generators
- Operation and control of synchronous generators – Frequency and voltage controllers
- Wind turbine generators – Operation and controls

Laboratory instructions will be available for download from the course website. Students are to work in pairs, and each laboratory team will hand in a single report. Students in the team will receive the same grade. Laboratory reports are due one week after the scheduled laboratory period.

**Assignments** Assignments will be made available for download about every fortnight. Assignments have to be submitted individually. Assignments will be due within one week.

## IGEE 418 – ELECTRICAL POWER GENERATION Detailed Schedule – Winter 2019

| Wk | Date    | Topic  | Inst.              | Assignments   | Laboratories, seminars, ind. visits  |
|----|---------|--|--------------------|---|--|
| 1  | 7 Jan.  | Prime energy sources – Conventional and renewable                              | FB                 |   |  |
| 2  | 14 Jan. | Characteristics and operation of hydro generators                              | FB                 | <b>Assignment 1</b> - Energy sources and electric power production    | <b>Seminar 1</b> - Introduction to hydrogeneration plants ( <b>HQ Production – Éric Lambert</b> )                |
| 3  | 21 Jan. | Synchronous generators – Steady state operation & modelling I                  | FB                 |   | <b>Lab 1</b> - Design procedures for large hydro generators  |
| 4  | 28 Jan. | Synchronous generators – Steady state operation & modelling II                 | FB                 |   |  |
| 5  | 4 Feb.  | Synchronous generators – Frequency and voltage control                         | FB                 | <b>Assignment 2</b> - Synchronous generator operation and control     | <b>Lab 2</b> - Operation and control of synchronous generators – Frequency and voltage controllers               |
| 6  | 11 Feb. | Static power converters – Principles of operation as grid-connected generators | FB                 |   | <b>Seminar 2</b> - Advanced synchronous generator controls ( <b>HQ Production – Éric Lambert</b> )               |
| 7  | 18 Feb. | Principles of wind energy conversion and systems                               | FT                 | <b>Assignment 3</b> - Static power converter operation                | <b>Industrial visit 1</b> – Parc éolien Pierre-De Saurel ( <b>PEPdS – Pierre Dion</b> )                          |
| 8  | 25 Feb. | Operation and control of grid-connected renewable generation                   | FB                 |   | <b>Industrial visit 2</b> - Centrale Beauharnois ( <b>HQ Production – Éric Lambert</b> )                         |
|    | 4 Mar.  | <b>Study break</b>   |                    |   |  |
| 9  | 11 Mar. | <b>Midterm examination</b>   | FB                 |   | <b>Lab 3</b> - Wind turbine generators – Operation and controls  |
| 10 | 18 Mar. | Energy storage systems and their role in renewable energy integration          | FB                 |   | <b>Seminar 3</b> – Solar farm engineering ( <b>CIMA+ – Éric Cantin</b> )   |
| 11 | 25 Mar. | Distributed generation interconnection and grid codes                          | FB                 |   |  |
| 12 | 1 Apr.  | Generation operations planning   | FB                 | <b>Assignment 4</b> – Hydrogeneration planning and storage management | <b>Seminar 4</b> - Integration of bulk generation into the electric grid ( <b>HQ TransÉnergie – Noël Aubut</b> ) |
| 13 | 8 Apr.  | Energy system integration  | FB                 |   |  |
| 14 | 18 Apr. | <b>Final Exam</b>  | Exam on all topics |   |  |

**Note:** The period for exams will take place from April 17<sup>th</sup> to May 4<sup>th</sup>, 2019 inclusive.
