INSTITUT EN GÉNIE DE L'ÉNERGIE ÉLECTRIQUE
INSTITUTE OF ELECTRICAL POWER ENGINEERING

IGEE 418 - ELE8461 – Electrical Power Generation
(Production de l'énergie électrique)

Course Outline
Winter 2020

Instructors: Professor François Bouffard, P.Eng.
Office: McGill University, McConnell Engineering Building, Room 642
Telephone: 514-398-2761
E-mail: francois.bouffard@mcgill.ca

Office Hours: By appointment.

Equivalences:

ECSE 463	Electrical Power Generation (McGill University)
ELE 8461	Production de l'énergie électrique (Polytechnique Montréal)
ELEC 498QP	Electrical Power Generation (Concordia University)
ELE760	Production de l'énergie électrique (École de technologie supérieure)
GEL-3010	Production de l'énergie électrique (Université Laval)
6GEI715	Production de l'énergie électrique (UQAC)
GEN44718	Production de l'énergie électrique (UQAR)

Prerequisites: A basic course in power system analysis and electromechanical energy Conversion. You should have a basic familiarity with: ac circuit analysis, three-phase systems, basic electromagnetic and electromechanical energy conversion devices.

Lectures: Polytechnique Montréal, Pavillon Lassonde – Room M-2004
Monday: 9:30 – 12:30

Laboratory: Polytechnique Montréal, Pavillon Principal – Room A-328
Monday: 13:45 – 16:45
Contact: Thibault Leyne
E-mail: thibault.leyne@mail.mcgill.ca

Note: The course website should be used for all communications and questions regarding the course and coursework.

Course Outline: Objectives of the course

The goal of this course is to introduce the fundamental principles and challenges arising in power generation.
The specific course objectives are:

- To understand the principles of operation of electrical power generators and related energy storage assemblies
- To understand the structure and principles of the controls related to electrical power generators and generating stations
- To understand the principles governing the design and sizing of electrical generators
- To understand the principles behind the protection methodologies applicable to electrical generating stations and particularly the generators themselves
- To understand the principles governing generation dispatch, including management of hydro reservoirs and generating units
- To understand the standards governing the integration of electrical power generators to the power grid (grid codes)
- To understand the standards governing the interconnection of dispersed electrical power generation to the power grid (interconnection standards)

Topics covered

- Energy sources
- Principles of design, operation and control of synchronous generators
- Principles of operation and control of wind and solar generators
- Generation planning
- Generating station grid interconnection

Grading Scheme:

Assignments (4)	25 %
Laboratory reports (3)	15 %
Mid-term examination	20 %
Final examination	40 %
Total	**100 %**

Laboratory: Work using computer simulations covers the following topics and applications:

- Design procedures for large hydro generators
- Operation and control of synchronous generators – Frequency and voltage controllers
- Wind turbine generators – Operation and controls

Laboratory instructions will be available for download from the course website.
Students are to work in pairs, and each laboratory team will hand in a single report.
Students in the team will receive the same grade.
Laboratory reports are due one week after the scheduled laboratory period.

Assignments Assignments will be made available for download about every fortnight.
Assignments have to be submitted individually.
Assignments will be due within one week.

IGEE 418 – ELECTRICAL POWER GENERATION
Detailed Schedule – Winter 2020

Wk	Date	Topic	Inst.	Assignments	Laboratories, seminars, ind. visits
1	13 Jan.	Prime energy sources – Conventional and renewable	FB	**Assignment 1 -** Energy sources and electric power production	
2	20 Jan.	Characteristics and operation of hydro generators	FB		**Seminar 1**- Introduction to hydrogeneration plants **(HQ Production – Éric Lambert)**
3	27 Jan.	Synchronous generators – Steady state operation & modelling I	FB		**Lab 1 -** Design procedures for large hydro generators
4	3 Feb.	Synchronous generators – Steady state operation & modelling II	FB	**Assignment 2 -** Synchronous generator operation and control	**Seminar 2** –Introduction to Preliminary Design, Manufacturing and Installation of Hydro Generators **(GE – Mohammed El-Kahel)**
5	10 Feb.	Synchronous generators – Frequency and voltage control	FB		**Seminar 3** - Advanced synchronous generator controls **(HQ Production – Éric Lambert)**
6	17 Feb.	Static power converters – Principles of operation as grid-connected generators	FB		**Lab 2** - Operation and control of synchronous generators – Frequency and voltage controllers
7	24 Feb.	Principles of wind energy conversion and systems	FT	**Assignment 3** - Static power converter operation	
	2 Mar.	**Study break**			
8	9 Mar.	Operation and control of grid-connected renewable generation	FB		**Industrial visit 1** – Parc éolien Pierre-De Saurel **(PEPdS – Christian Patenaude)**
9	16 Mar.	**Midterm examination**	FB		**Lab 3** - Wind turbine generators – Operation and controls
10	23 Mar.	Energy storage systems and their role in renewable energy integration	FB		**Seminar 4** – Solar farm engineering **(CIMA+ - Éric Cantin)**
11	30 Mar.	Distributed generation interconnection and grid codes	FB		**Industrial visit 2** - Centrale Beauharnois **(HQ Production – Éric Lambert)**
12	6 Apr.	Generation operations planning	FB	**Assignment 4** – Hydrogeneration planning and storage management	**Seminar 5 -** Integration of bulk generation into the electric grid **(HQ TransÉnergie – Noël Aubut)**
13	Mercredi 15 Apr.	Energy system integration	FB		
	TBA	**Final Exam**	Exam on all topics		

Note: *The period for exams will take place from April 21st to May 5th, 2020 inclusive.*
